

DUCTEL Lite installation trunking system

Quality in Focus

Lite is a new installation trunking system that complements the **DUCTEL® Twist** product family. The u-design in the bottom and cover stiffens the trunking and makes the installation easier and quicker. Because of the stiffness and stability the trunking will maintain its fine condition over the years. The smooth surface is easy to keep clean and it will not attract dust. Factory made installation parts ensure a finished and neat result.

Safe

The shockproof aluminum trunking is an excellent choice for public spaces and conditions where heavy use is part of everyday life, e.g. schools, hotel rooms, stairways, offices and commercial and technical premises.

The cover will be locked when installed and it can be opened only with a tool. The trunking is perfectly suitable for wiring the camera and surveillance systems. Installation trunking is also vandal resistant and maintenance free.

The system is fire-safe. Aluminum won't increase the fire load and the installation parts are V0-fire protected. TBA40 system applies for installations made inside as well as outside because of the UV-resistant materials.

Installation friendly

Mounting is made to walls or ceilings with screws or stickers. The cover is fastened with a snap-on technique. The cover and bottom are sawed to the same length so there won't be time consuming notches. Working is easy also at the site. The marks from hand sawing are covered with the installation parts.

The structure solution of the bottom and cover enables also space-saving corner installations.

The quick mounted cable locks provide an easier and faster installation, especially when it comes to roof installations.

Eco-friendly

Aluminum trunking, installation parts and package materials are fully recyclable.

The new installation trunking system is an excellent choice for long life cycle destinations because of its structural strength and material durability.
